COURSEWORK

UNDERGRADUATE

Data Structures

Algorithms Design & Analysis

Discrete Mathematics

Object-Oriented Programming

Database Management System

Data Communication & Networks

Operating System

Compiler Design

Cloud Computing

Artificial Intelligence

INDEPENDENT

Udemy:

Advanced Algorithms in Java

Spring & Hibernate for Beginners

Coursera:

Machine Learning

SKILLS

PROGRAMMING

Languages:

Java, Python, HTML, CSS

Frameworks:

Spring Boot, Hibernate

Data Visualization & Modeling:

Matplotlib, Seaborn

Databases:

MySQL

Tools:

Tomcat, Git, Tensorflow, Keras, NLTK,

Tesseract, Scikit-Learn

OPERATING SYSTEM

Linux/Unix

Windows

EXPERIENCE

TELIBRAHMA SOFTWARE SERVICES LLP | ML INTERN

Mar. 2019 - Jun. 2019 | Bangalore, India

- Created an **Object Detection + Automatic Number Plate Detection** model which focuses on detecting vehicles to define a region of interest (ROI) and performing an OCR on ROI for Indian car number plates in real-time.
- The model was integrated with a socket server along with deployment to an **AWS instance**.

CONSTEMS-AI SYSTEM PVT. LTD. | SOFTWARE ENGINEER INTERN

Jun. 2018 - Jul. 2018 | Noida, India

- Built an alpha version of an **Integrated UI/UX for an AI-based Grading System** & an **Advanced System Control for an AI-Powered Camera** for Linux Operating System.
- Solely responsible for the **system design and development** of the above alpha model.

PROJECTS

SIGNIFY | NATURAL LANGUAGE PROCESSING, PYTHON

- Developed a **Sign Language Translator**, which takes real-time speech input and generates sign language symbols for that, thereby eliminating the need for an interpreter.
- Used Natural Language Toolkit (NLTK) to add **sentiment analysis** support which uses 2-way polarity (positive & negative) classification system for input.

IMAGE CLASSIFIER | DEEP LEARNING, WEB SCRAPING, PYTHON

- Wrote a python script to perform data collection of images using **web scraping** technique to create a dataset from the IKEA website.
- Built a Deep Learning Model which uses a **convolutional neural network based image classifier** implemented in keras to classify images into 4 categories - beds, tables, chairs and tableware.
- The model successfully achieved an accuracy of 92% on the training set and 85% on the test set.

KAGGLE HOUSE PRICES | MACHINE LEARNING, PYTHON

- Developed a Machine Learning Model for Kaggle House Prices Prediction Competition to **predict house prices** and to perform **data visualization techniques** to understand the insights of the data.

EMAIL VERIFICATION USING LINK | J2EE, REST, TOMCAT

- Created a Java application to **generate verification links** and send the user an email requiring them to click the link to verify their email before their email is added to whatever you want to add it to.
- This helps to verify users through their email and **prevent spam users**.

ACTIVITIES

2014	Rotaract Club	Blood Donation Camp Volunteer
2016	Bhumi NGO	Peer Mentor
