COURSEWORK

UNDERGRADUATE
Data Structures
Algorithms Design & Analysis
Discrete Mathematics
Object-Oriented Programming
Database Management System
Data Communication & Networks
Operating System
Cloud Computing
Artificial Intelligence

INDEPENDENT
Udemy:
Advanced Algorithms in Java
Spring & Hibernate for Beginners
Coursera:
Machine Learning

SKILLS

PROGRAMMING
Day to Day:
Java • Python • HTML • CSS
Familier with:
Java Server Pages (JSP) • Spring Boot
Hibernate
Database & Cloud:
MySQL • Amazon Web Services (AWS)
Other:
Tomcat • Git • Tensorflow • Keras
Scikit-Learn

STRENGTH
Algorithms • Data Structures • OOPS
Problem Solving • Quick Learner

OPERATING SYSTEM
Linux • Windows

EXPERIENCE

TELIBRAHMA SOFTWARE SERVICES LLP | ML Intern
Mar. 2019 - Jun. 2019 | Bangalore, India
- Created an **Object Detection + Automatic Number Plate Detection** model which focuses on detecting vehicles to define a region of interest (ROI) and performing an OCR on ROI for Indian car number plates in real-time.
- The model was integrated with a socket server along with deployment to an **AWS instance**.

CONSTEMS-AI SYSTEM PVT. LTD. | Software Engineer Intern
Jun. 2018 - Jul. 2018 | Noida, India
- Built an alpha version of an **Integrated UI/UX for an AI-based Grading System** & an **Advanced System Control for an AI-Powered Camera** for Linux Operating System.
- Solely responsible for the **design and development** of the above alpha model.

PROJECTS

SIGNIFY | Natural Language Processing, Python
- Developed a **Sign Language Translator**, which takes real-time speech input and generates sign language symbols for that, thereby eliminating the need for an interpreter.
- Used Natural Language Toolkit (NLTK) to add **sentiment analysis** support which uses 2-way polarity (positive & negative) classification system for input.

IMAGE CLASSIFIER | Deep Learning, Web Scraping, Python
- Wrote a python script to perform data collection of images using **web scraping** technique to create a dataset from the IKEA website.
- Built a Deep Learning Model which uses a **convolutional neural network based image classifier** implemented in keras to classify images into 4 categories - beds, tables, chairs and tableware.
- The model successfully achieved an accuracy of 92% on the training set and 85% on the test set.

EMAIL VERIFICATION USING LINK | J2EE, REST, Tomcat
- Created a Java application to **generate verification links** and send the user an email requiring them to click the link to verify their email before their email is added to whatever you want to add it to.
- This helps to verify users through their email and **prevent spam users**.

IBANK | Java, Swing, MySQL
- Developed a **desktop application** for banking purposes, capable of creating new accounts, depositing & withdrawing money along with fetching & displaying customer lists and transaction details.

ACTIVITIES

| 2014 | Rotaract Club | Blood Donation Camp Volunteer |
| 2016 | Bhumi NGO | Peer Mentor |
